During your Spring Break destination (here in Tucson if that is your destination) locate a piece of NATURAL VEGETATION*. Take a digital photograph† of it and email it to odavis@email.arizona.edu for use in NATS 104.

Up to 10 points will be awarded for
1. The digital photograph (2 pts)
2. A statement from you stating that it was taken by you, and a statement giving me permission to use the photograph
3. A statement specifying where and when the photograph was taken
   a. The place name: country, state, county, elevation, longitude, latitude as much information as possible (2 pts)
   b. The Latin name (e.g., *Larrea tridentata*) of one (common, important) plant shown in the photograph (3 pts)
   c. The name of the biome or ecoregion shown in the photograph (see the National Atlas in workshop 8) (3 pts)

The photo below was taken by me, Owen Davis. I give Prof. Davis permission to use this photograph.
Owen Davis, August 21, 1980, Mount Katahdin, Maine
45° 54’ N, 68° 68’ W, 1524 m elevation
Tundra Biome, (rock fellfield)
Dominant Plant, lichen *Skyttea richardsonii*

* Natural vegetation: *vs.* manmade. Your flower-pot is *not* natural vegetation, the UA Mall, including the cactus garden, is not natural vegetation. A vacant lot *may* be natural vegetation if has not been destroyed by bulldozers and overrun by weeds.
† 2/10 pts. You need to know how to do this! It’s OK if a friend takes it for you while you are there, but you have to email it, and you *do not* have to be in the photograph, but I think those are great!
